Reported on : 07/02/2022 12:45:54

Investigation(s): Urine hCG/Preg.Test

Test Name	Value	Unit	Normal Value
Urine hCG - Qualitative/Preg.Test	NEGATIVE		

**Remarks**

A false-negative result can happen after any of the followings-

- Using a urine sample collected after your first morning urine.
- Taking the test before there's enough hCG to produce a positive result.
- Miscalculating the timing of missed period.

**If there is a negative result, should be repeated the test within about a week to confirm the absence of pregnancy.**

If there is a believe the tests are indicating a false negative, strongly recommended to consult your doctor. Doctor can advise to conduct an hCG blood test, which is more sensitive to lower levels of the hCG hormone than the hCG Urine Test.
