

Name : MR. SPECIMEN REPORT
Pat. ID : 2202065 Age : 28 Yrs. 3 Mn. 22 Day Gender : M
Ref. By : FAMILY PHYSICIAN

Registered on : 06/02/2022 12:38:06
Received on : 06/02/2022 12:38:00
Reported on : 06/02/2022 12:38:24

Investigation(s): Hb-AHM

Test Name	Value	Unit	Normal Value
Haemoglobin; AHM	13.7	gm/dL	13.5 - 18.0

Interpretation(s)

Hemoglobin: critical low and high values-
< 6 gm/dl may result in heart failure.
> 18 gm/dl may cause vascular occlusion because of hemoconcentration.

Increased Hemoglobin occurs with the Burns, Heart failure, COPD, Dehydration, Erythrocytosis, hemoconcentration, High altitudes, Polycythemia etc.

Decreased Hemoglobin occurs with the Thalassemia, Sickle cell disease, Iron deficiency anemia (hypochromic anemia), Physiological anemia of pregnancy, Serial blood draws, Continuous Bleeding, Hemolytic disorders, Malignancies, Hodgkin's disease, Pregnancy, Nutritional deficit, Fluid retention, IV overload etc.
